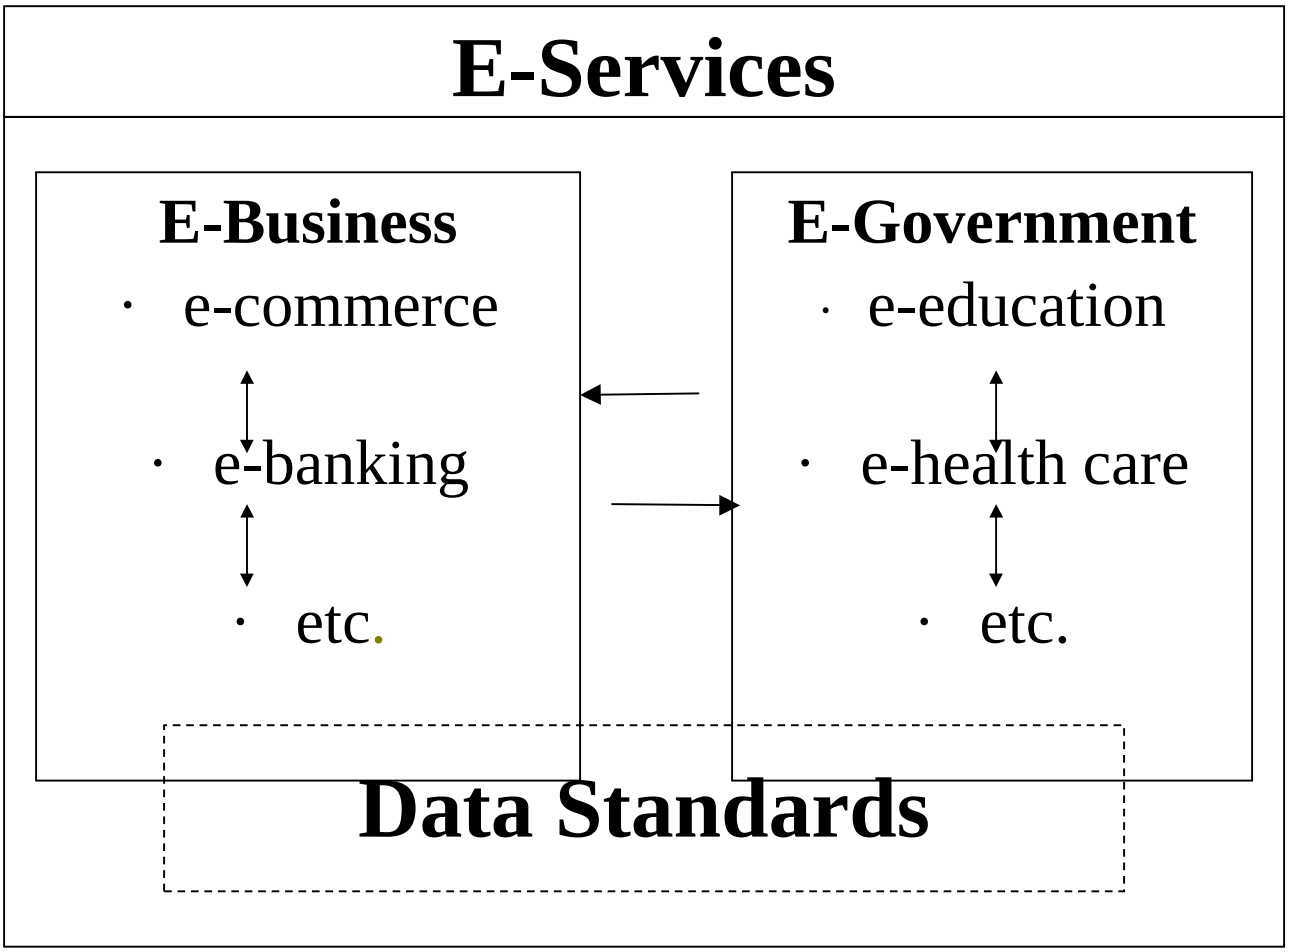
**Electronic Data Interchange**



**E-Services framework**

## Available Options

- APEC VC project are implement the 7 keys of world business for sustainable Development by Internet Innovate,
- Practice Eco-efficiency,
- Move from stakeholder dialogues to partnerships for progress,
- Provide and inform consumer choice,
- Improve market framework conditions, Establish the worth of Earth, Make the market work for everyone.

## Recommendation

- Optimised processes: reduce resource use, impacts, and operational costs
- Re-valorised by-products: cooperage between companies to improve cost efficiencies while moving towards a zero waste target
- Innovative products and services: deliver better design and functions for lower impact in use and higher market share.
- Business has a responsibility to innovate, to market safe and sustainable products and services that improve quality of life and are broadly accessible. It must adopt high ethical standards in how it operates and provide information that enables people to make appropriate choices.
- Governments have the responsibility to work with all actors of society to set priorities. They must establish market framework conditions that promote environmental, social and economic sustainability.
- Consumers and citizens are responsible for using the information available in the market to make choices that meet their needs and aspirations sustainable
